

FAIRCHILD F-27

IMPORTANT INFORMATION

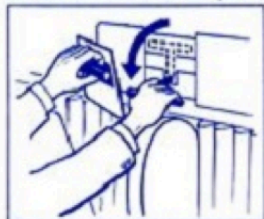

Like all commercial airliners, the F-27 prop jet is equipped with special safety devices. It is extremely unlikely that these facilities will be needed, but simply as a precaution we would like you to be familiar with them. Below you will find a cabin plan of this aircraft with various exits clearly marked as well as a descriptive explanation of how to open the window exits.

PACIFIC AIR LINES

EMERGENCY EXITS

1. PULL to remove access panel.

2. PULL handle DOWN.

3. Windows opens INWARD.

4. Turn on side and toss out.

A Message of Importance

No AM or FM radio device or TV receiver may be operated by passengers on Pacific Air Lines Aircraft during flight. Passengers may operate medical aids and recording or dictating devices. It has been determined that passenger operated electronic devices can cause malfunctioning of aircraft communications and navigation systems.

Therefore, all of the scheduled airlines, in the interest of public safety, agreed to prohibit passenger operation of all AM and FM radio devices and TV receivers. The Federal Aviation Agency further strengthened this regulation by enacting a special Civil Air regulation (US 446-B) prohibiting the operation of FM radios on commercial aircraft.
